Kate,

I will have a better sense of the time needed after the conference call with Excelsior next week, but I estimate one more week at this point. Will let you know if that changes next week.

Thanks,

Jim

Hi Jim.

Thanks for the summary.

Will discuss status of this TDM with Joel next week to get more info about timing. How much more time do you anticipate needing to complete the tech review?

Thanks. Kate

Subject: San Joaquin Refinery Permit Application

Hi Kate,

Joel and I conversed by phone on January 10th about the San Joaquin Refinery Class I NH permit application and the best approach to the technical review of the application. We discussed the key issues to be addressed in the review, including the area of review (AOR) determination method, the aquifer exemption related to the permit application, and USDWs in the AOR. The format of the technical analysis report will be similar to the Hilmar and Sunrise technical reviews.

The review is due by February 10, 2017, but I indicated that we may request that it be extended somewhat to provide sufficient time to complete the review and draft comments on the response to the RFI for the Excelsior permit application due by January 18th and prepare for a conference call with EPA and Excelsior on January 24th.

Thanks,

Jim
